

Complex Glazing Database: Version 11.0

Windows and Envelope Materials Group, Lawrence Berkeley National Laboratory; <https://windows.lbl.gov/software/cgdb>

Notes for 11.0:

There are two databases, one for WINDOW 7.4 and one for WINDOW 7.6, because they have different database formats. The WINDOW 7.4 database does not have Cellular Shade products because WINDOW 7.4 does not have a good Cellular Shade model. To model Cellular Shades, use WINDOW 7.6. In addition, the ODL products in the CGDB version for WINDOW 7.4 are all listed as being added in Version 11.0. However, this is not correct, but it was the only way to have the new ODL products reflect that they were added in Version 11.0, as the records from the Shade Material Library are the same for both the old and the new records. In WINDOW 7.6, it is possible to separate the version submitted in the Shade Material Library from the version submitted in the Shading Layer Library, but not in WINDOW 7.4. These release notes reflect the records in WINDOW 7.6

Notes for 10.0:

Any products with XML files have been set to Version 10.0 because of changes to the Permeability (previously called Openness Factor)

Alkenz had multiple Manufacturer names in previous versions. All those records now have Manufacturer name = Alkenz, and have been set to CGDB V 9.0 because of this name change.

In WINDOW 7.5, the program automatically calculates the openness factor for Venetian blind (horizontal), Venetian blind (vertical) and Perforated Screens. The products in the CGDB for WINDOW 7.4 have been updated with those calculated values from WINDOW 7.5. In addition, the openness factor for Type = "Shade with XML data" has been set to the TIR value from each of the XML files.

Notes for 9.0:

Some Intigral, ODL, Phifer, Shanghai King and Trimlite products had incorrect version numbers in previous databases and release notes. That has been corrected in this version of the release notes and the database.

Notes for 8.0:

All ODL products have been updated for this version.
